L^AT_EX background

Background

Background

- $\text{T}_{\text{E}}\text{X}$ was developed by Donald Knuth in 1978

Background

- $\text{T}_{\text{E}}\text{X}$ was developed by Donald Knuth in 1978
- Helps scientists and academics produce papers in a standard format

Background

- T_EX was developed by Donald Knuth in 1978
- Helps scientists and academics produce papers in a standard format
- Standardised formatting, typesetting, alignments, references, etc.

Background

- $\text{T}_{\text{E}}\text{X}$ was developed by Donald Knuth in 1978
- Helps scientists and academics produce papers in a standard format
- Standardised formatting, typesetting, alignments, references, etc.
- **Stylistic advantages:**
 - ✓ Horizontal and vertical alignment
 - ✓ Smart automatic float (images, tables, equations)
 - ✓ Placements, automatic numbering, easy cross-referencing

Background

- $\text{T}_{\text{E}}\text{X}$ was developed by Donald Knuth in 1978
- Helps scientists and academics produce papers in a standard format
- Standardised formatting, typesetting, alignments, references, *etc.*
- **Stylistic advantages:**
 - ✓ Horizontal and vertical alignment
 - ✓ Smart automatic float (images, tables, equations)
 - ✓ Placements, automatic numbering, easy cross-referencing
- $\text{L}_{\text{A}}\text{T}_{\text{E}}\text{X}$ is a scripting language, *i.e.* you will write in a script and then execute it to generate an .pdf file

Background

- $\text{T}_{\text{E}}\text{X}$ was developed by Donald Knuth in 1978
- Helps scientists and academics produce papers in a standard format
- Standardised formatting, typesetting, alignments, references, *etc.*
- **Stylistic advantages:**
 - ✓ Horizontal and vertical alignment
 - ✓ Smart automatic float (images, tables, equations)
 - ✓ Placements, automatic numbering, easy cross-referencing
- $\text{L}_{\text{A}}\text{T}_{\text{E}}\text{X}$ is a scripting language, *i.e.* you will write in a script and then execute it to generate an .pdf file
- **General advantages:**
 - ✓ Low computation requirements
 - ✓ Standard for STEM fields (journal & conferences)
 - ✓ Bibliography system Biber/BibTex is great
 - ✓ Programmable!
 - ✓ Open source and has a large community of users and developers as well as a good infrastructure

Writing your first \LaTeX document

Writing your first L^AT_EX document

Writing your first \LaTeX document

- A \LaTeX doc is written in a `.tex` file, which is similar to a `.txt` file

Writing your first L^AT_EX document

- A L^AT_EX doc is written in a .tex file, which is similar to a .txt file
- A new .tex file can be created using *ctrl+n* or from tab File → New

Writing your first L^AT_EX document

- A L^AT_EX doc is written in a .tex file, which is similar to a .txt file
- A new .tex file can be created using *ctrl+n* or from tab File → New
- At the beginning of a L^AT_EX document one has to set certain document parameters like font size, document class, paper size, page layout, etc. — called the preamble

Writing your first L^AT_EX document

- A L^AT_EX doc is written in a .tex file, which is similar to a .txt file
- A new .tex file can be created using *ctrl+n* or from tab File → New
- At the beginning of a L^AT_EX document one has to set certain document parameters like font size, document class, paper size, page layout, *etc.* — called the preamble
- Hint: Wizards tab!

Writing your first L^AT_EX document

- A L^AT_EX doc is written in a .tex file, which is similar to a .txt file
- A new .tex file can be created using *ctrl+n* or from tab File → New
- At the beginning of a L^AT_EX document one has to set certain document parameters like font size, document class, paper size, page layout, *etc.* — called the preamble
- Hint: Wizards tab!
- Anything between a `\begin{}` & `\end{}` is called an environment

Writing your first L^AT_EX document

- A L^AT_EX doc is written in a .tex file, which is similar to a .txt file
- A new .tex file can be created using *ctrl+n* or from tab File → New
- At the beginning of a L^AT_EX document one has to set certain document parameters like font size, document class, paper size, page layout, *etc.* — called the preamble
- Hint: Wizards tab!
- Anything between a `\begin{}` & `\end{}` is called an environment
- While writing your document, make use of sections and subsections

Writing your first L^AT_EX document

- A L^AT_EX doc is written in a .tex file, which is similar to a .txt file
- A new .tex file can be created using *ctrl+n* or from tab File → New
- At the beginning of a L^AT_EX document one has to set certain document parameters like font size, document class, paper size, page layout, *etc.* — called the preamble
- Hint: Wizards tab!
- Anything between a `\begin{}` & `\end{}` is called an environment
- While writing your document, make use of sections and subsections
- `\section{SectionName}` — this command will automatically number and write the section title in the appropriate format

Writing your first L^AT_EX document

- A L^AT_EX doc is written in a .tex file, which is similar to a .txt file
- A new .tex file can be created using *ctrl+n* or from tab File → New
- At the beginning of a L^AT_EX document one has to set certain document parameters like font size, document class, paper size, page layout, *etc.* — called the preamble
- Hint: Wizards tab!
- Anything between a `\begin{}` & `\end{}` is called an environment
- While writing your document, make use of sections and subsections
- `\section{SectionName}` — this command will automatically number and write the section title in the appropriate format
- All of these commands will help you create a neatly structured document
